

Thorough Search Competencies

dtSearch Engine Embedded Into eDiscovery Module Of Sherpa Software's Altitude IG

SHERPA SOFTWARE'S Altitude IG is an on-demand platform designed to provide organizations with a comprehensive information governance solution. This platform features a hosted back-end, which offers ubiquitous administrative access—and at the same time ensures secure, on-premises enforcement for corporate data to remain in place. The dtSearch Engine has been integrated into the new eDiscovery module, built specifically for in-house teams to manage legal hold notifications, search and collection for legal discovery requests,

compliance requirements, or internal investigations.

“Our customers are finding enormous cost and time savings by conducting electronic discovery searches in-house,” says Kevin Ogrodnik, president of Sherpa Software. “It is critical that we provide them with the most thorough search competencies on the market, and that’s what we get with dtSearch.”

“Even before this offering, Sherpa was well-known for its archival and eDiscovery solutions,” says David Thede, president, dtSearch. “The addition of Altitude IG will make Sherpa’s

solutions even more accessible for in-house eDiscovery.” 

dtSearch®

dtSearch instantly searches terabytes of text (with 25+ search options) across a wide range of platforms and data formats. See www.dtsearch.com for hundreds of reviews and case studies, and full evaluations.
